TO WHOM IT MAY CONCERN

It is with much enthusiasm that I am writing to recommend the services performed by the SATMAR Satellite Communication & IT Services Company.

Navigator Gas Company has been cooperating with SATMAR which provides comprehensive solutions to our fleet since 2012. Those include hardware delivery, installation, commissioning and repairs of satellite communication terminals based on IRIDIUM and Ku/C band VSAT systems throughout our fleet of 40 vessels. After 7 years of partnership Navigator Gas has always been completely satisfied with their performance and professional approach to our needs.

SATMAR Company has a great team of highly skilled and dedicated engineers in the field of maritime satellite communication and ITC sector. Recognizing their deep technical experience and knowledge we have also extended our collaboration by signing a long-term agreement to provide remote support services for delivered products and airtime to our crews within NG fleet.

I highly recommend SATMAR as a reliable technical partner, who finds creative and innovative solutions in seemingly unsolvable situations. Both while in the field or remotely from office. Such work ethics combined with professional conduct results in saving the time, money and resources.

I'm happy to endorse the services of SATMAR Company. You can rely on them for sure.

Sincerely,

Janusz Borowicz
Navigator Gas
